

42 COMPANIES AND ORGANIZATIONS • 2163 EMPLOYEES • \$375.5 MILLION OF INVESTMENT

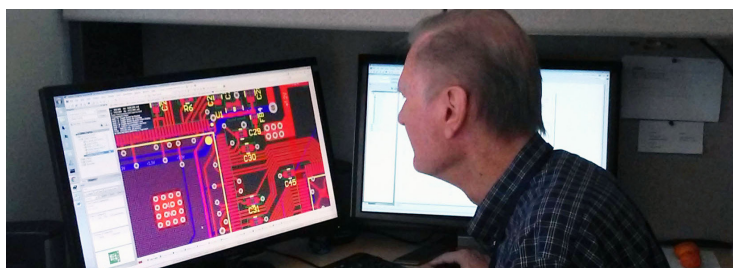

The “A Day in the Life of the Sandia Science & Technology Park” video got us to move here. It’s that kind of information that has a chance of persuading business people like us that this is the place to come. We have already connected with more people here in a month than we did in the last nine years where we were.

Scott Wilber, President, ComScire – The Quantum World Corporation

COMPANY AND ORGANIZATION NEWS

ComScire Moves to the Park

ComScire recently moved its office from Florida to the SS&TP. The company designs, manufactures, and sells quantum random number generators worldwide to defense contractors, military, and civilian security agencies as well as to state and country lotteries and gaming companies. More at comscire.com.

New Leadership at Raytheon

Susan Kelly is the new Site Director of Raytheon Company in the SS&TP. She replaced former Site Director Steve Downie, who has now retired. Susan joined Raytheon in 1996 and has worked on numerous missile development and production programs. Mary Clum is now Site Integrator and brings over 17 years of expertise in management of groups across a multitude of functions to the position. Both Susan and Mary will be responsible for site management and performance. Raytheon is developing high power microwave technologies and mobile range telemetry systems at the SS&TP site.

RECENT EVENTS

La Luz ECC Sets Up a Petting Zoo

From bike paths and food trucks, to pocket parks and exercise stations, the SS&TP now has experienced its first petting zoo. The La Luz Early Childhood Center (La Luz ECC), located in the Park, invited A to Z Animals from Belen, New Mexico, to set up a petting zoo at their facility. Farm animals included a cow, goat, pig, turkey, and donkey. There was even an exotic bird and camel. This experience was a great way for the children to learn and interact with the animals for a day.

Entrepreneur Exploration

Alumni from Sandia National Laboratories’ Academic Alliance schools gathered at a seminar to learn more about Sandia Labs’ Technology Transfer, Licensing, Entrepreneur Separation to Transfer Technology, and Entrepreneur Exploration programs. Collaboration with these universities should lead to more opportunities for technology transfer for the public good. One attendee stated, “Sandia is built on the idea that we have the best and brightest here. We come up with novel ideas all the time for national security. I think trying to split off and build companies around these ideas is an excellent idea, and right in line with Sandia’s dedication to technical excellence.” Over 25 Sandians attended the seminar.
